Top Secret - Database entity-relationship diagram

Current implementation snapshot

Each mission has one facility and one or more unique agents, who may belong to any facility. Briefs are optional.

RESTRICT protects facilities/agents. Deleting a mission removes its links and clears briefs.mission_id.

* Blank strings represent optional death date and notes. All stored dates use ISO text.

audit_log content_id is historical and polymorphic, not a foreign key. Credentials remain in a ciphered file.

Inbox: agents.name = username, ignoring case.

See interface-design.txt and content-model.txt for contracts, integrity rules and regression steps.
