Homework 5 - Current database entity relationship diagram

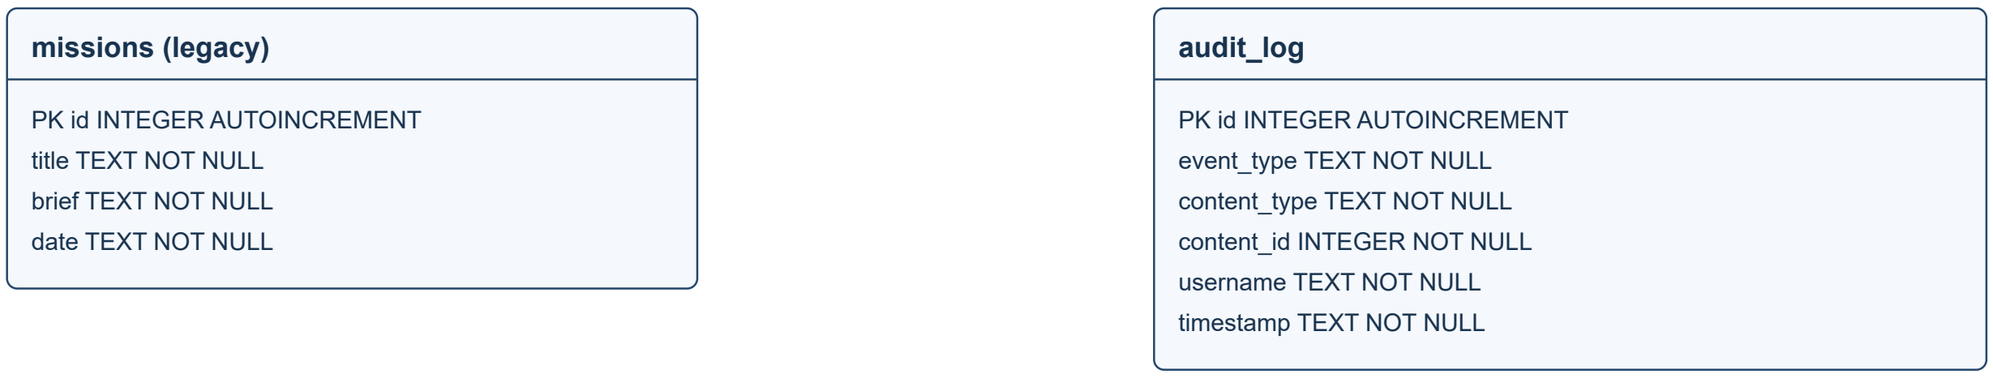

Team 2-33 | Member B integration | Current implementation, October 22, 2026

Agent facility_id references facilities.id; ON DELETE RESTRICT. Each agent has exactly one facility.

* Blank strings represent optional death date and notes. Dates are ISO text; adapter validates input.

Foreign keys must be enabled on every writer connection. Briefs are independent of missions.

Audit content_id is a historical, polymorphic reference, not a foreign key. Credentials remain in a ciphered file.

Pending Member C: mission-to-facility and mission-to-agent relationships are absent in the current schema.

See homework5-member-b.txt for interface contracts, regression steps and outstanding team requirements.
