Top Secret - Database entity-relationship diagram

Current implementation snapshot

mission_facilities permits one facility per mission. mission_agents permits one or more unique agents per mission.

RESTRICT protects referenced facilities/agents; CASCADE removes relationship rows when a mission is deleted.

* Blank strings represent optional death date and notes. All stored dates use ISO text.

audit_log content_id is historical and polymorphic, not a foreign key. Credentials remain in a ciphered file.

Inbox: agents.name = username, ignoring case.

See interface-design.txt and content-model.txt for contracts, integrity rules and regression steps.
